

StructlQ

Revit-integrated software reducing material costs and embodied carbon

The hidden cost of construction

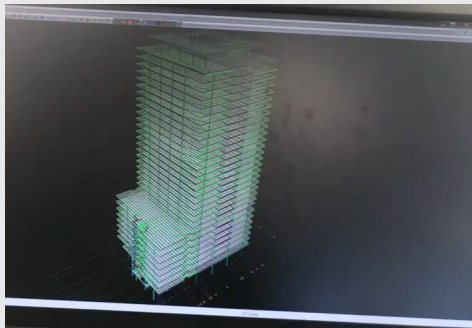

Why are CO2 regulations being imposed?

⚠ Buildings Drive 40% of Global Emissions

Reducing the losses is painful

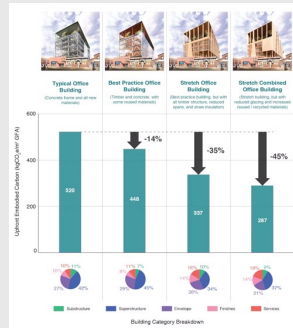

Pain point no.1: Time-consuming, high-complexity and manually-executed process

Design

Design many framing geometries by hand

01.

Optimize

Optimize each framing geometry for each material using a different software

02.

ECM NPV Relative to Proposed Design										
Category	Carbon Footprint	Baseline	Baseline	Baseline	Baseline	Baseline	Baseline	Baseline	Baseline	Baseline
Carbon Footprint	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
Baseline	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
Baseline	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
Baseline	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
Baseline	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
Baseline	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
Baseline	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
Baseline	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
Baseline	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
Baseline	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%

Calculate

Map out embedded carbon of each material and calculate cost consequences

03.

ENERGY/CARBON CONSERVATION MEASURE (ECM) DATA										
Category	Carbon Footprint	Baseline	Baseline	Baseline	Baseline	Baseline	Baseline	Baseline	Baseline	Baseline
Carbon Footprint	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
Baseline	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
Baseline	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
Baseline	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%
Baseline	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%

One Click **LCA**

Embodied Carbon
Calculations

Currently, there is no integrated software that leverages the data and time spent on existing building modules

Reducing the losses is painful

Pain point no.3: Embodied carbon regulations for buildings are emerging

Switzerland: *Embodied Carbon Regulatory Shift*

1. SIA 390/1 (Effective Feb 2025)

- National standard for whole-life GHG accounting requiring lifecycle carbon calculation (embodied + operational)

2. MuKEN 2025 (Cantonal Implementation 2025–2027)

- Cantons required to implement embodied carbon limits
- Draft benchmarks: -12–13 kg CO₂-eq/m²·yr (residential)

3. Minergie-ECO & SNBS (Market Pull)

- Voluntary but widely used sustainability labels
- Require meeting defined embodied carbon thresholds
- Frequently mandated in public-sector projects

Canada: *Emerging Embodied Carbon Regulation*

1. Federal Standard on Embodied Carbon in Construction

- Major federal construction/renovation tenders requires embodied carbon disclosure + reduction commitments and EPD reporting.

2. Municipal Programs (e.g., Toronto Green Standard)

- Municipal sustainability standards require embodied carbon assessment/reporting for building permits in higher tiers.
- E.g. Toronto Green Standard Tier 4 limits embodied carbon.

3. Market & Voluntary Standards

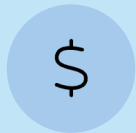

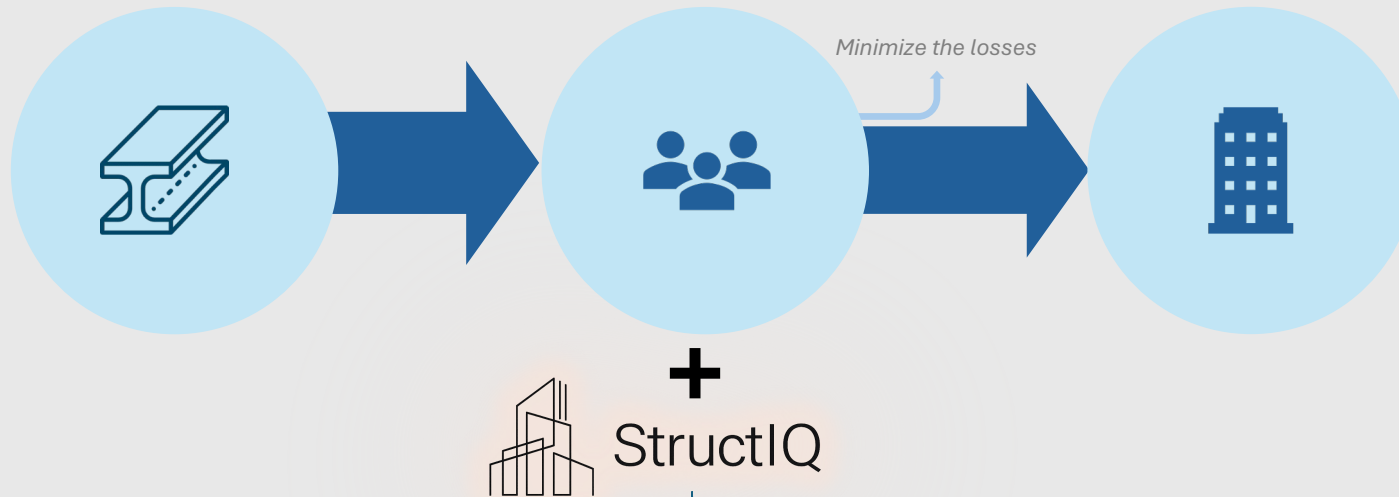

- Canada Green Building Council (CAGBC) voluntary Zero Carbon Building Standard includes embodied carbon consideration

Voluntary measurement is shifting to enforceable limits.

The solution: StructIQ

Reduce the embodied carbon and optimize the costs in one-click

Cost Optimization

Minimize material expenses

Carbon Reduction

Lower embodied emissions

BIM Integration

Seamless workflow

Value creation by savings

Saving your time

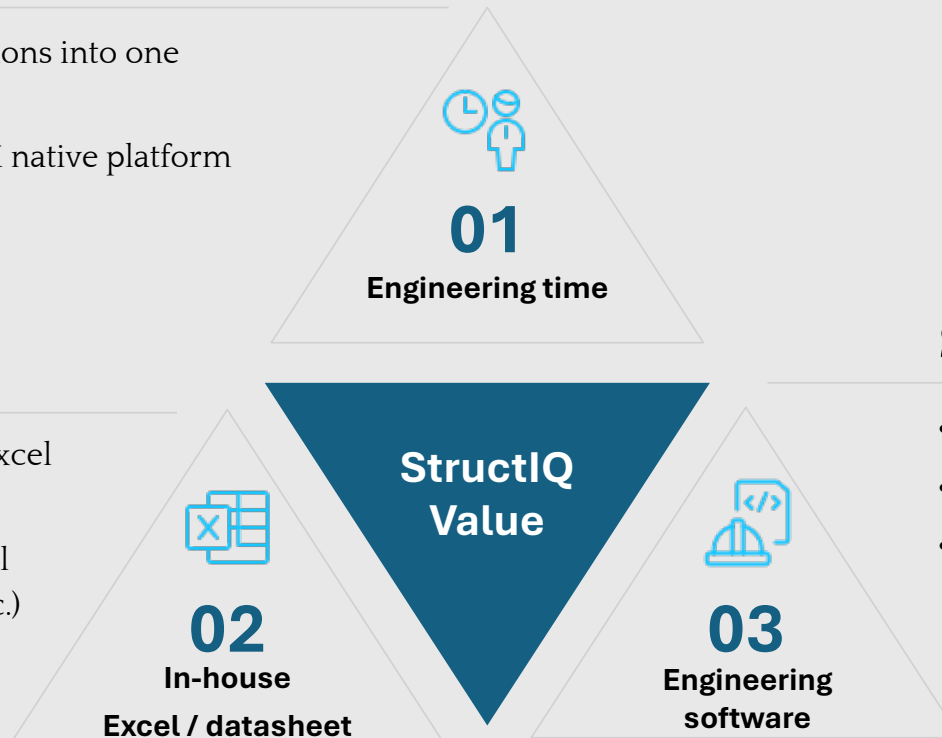

- Combine all relevant calculations into one program
- Integrate seamlessly with BIM native platform

Saving your effort

- Fully replace your in-house excel sheets and database
- Automatically update material sustainable standard (EPD, etc.)

Saving your budget

- Fully replace other software such as:
- One Click LCA
- Grasshopper

Design cycle importance

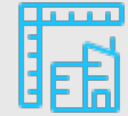

1. Concept Design

2. Preliminary Design

3. Detailed Design

4. Construction Documents

Carbon-Cost Analysis at early stage

Carbon-Cost Analysis

1. Opportunity to switch structural systems
2. Carbon-cost trade-offs can be balanced early stage, avoiding expensive redesign
3. Ensures alignment with regulations

1. Only able to measure carbon, not reduce it

How StructIQ Works

1

Smart Data Ingest

Pulls geometry, materials, and constraints directly from Revit via API

2

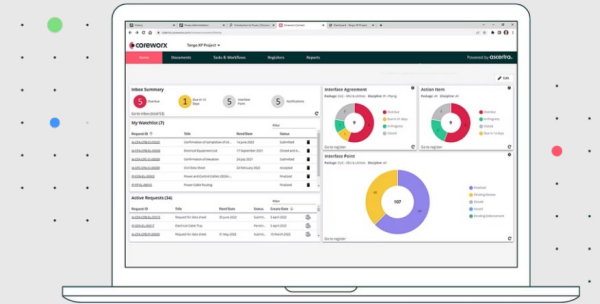

ML Trained Parametric Optimization ('The Magic')

Runs thousands of framing permutations trained on meeting Canadian Building Code standards and Green building Certifications

3

Carbon-Cost Pareto Analysis

Plots optimal design options. Selects lowest-carbon, lowest-cost, or best tradeoff, and provides smart material recommendations all in Revit

Unlocking the BIM Opportunity

75%

BIM Market Share

Autodesk dominates the architectural and engineering software space

4M

Active Revit Users

Global user base driving demand for specialized plugins

10-400*

Monthly App Pricing

StuctIQ positioned at 75-150 because of legislation & cost saving.

Decarbonization
Commitment

Serviceable Obtainable Market

Go-to-Market Strategy

Target Identification

Focus on Swiss and Canadian structural engineers and architects using Revit daily

Distribution Channels

Launch through Autodesk App Store for credibility, supplement with LinkedIn outreach and industry conference presence

Pilot Partnerships

Partner with 3-5 Swiss/ Canadian firms for case studies, offering 2-months free trials in exchange for feedback

Subscription Model

Trial + Paid Subscription: 100CHF/month with 30-day trial

- Phased approach builds credibility through established channels + creating early adopters
- Bundled subscription model where companies can buy a package for their employees

Distribution Channel

Autodesk App Store

Direct marketplace access SECURED

Free Hosting

Autodesk infrastructure support

Built-in Marketing

Leverage Autodesk's user base

Developer Support

Technical partnership established

Why does Revit not do this?

"Combining a platform mindset with innovation creates a superpower that helps companies differentiate, compete, and change the world." -Mike Haley, Lead Autodesk Researcher

Revit is a Platform, Not a Specialist Tool

- Revit is built to model and host building data.
- General-purpose BIM environment w/o optimization capabilities.
- Advanced features intentionally left to plugins.

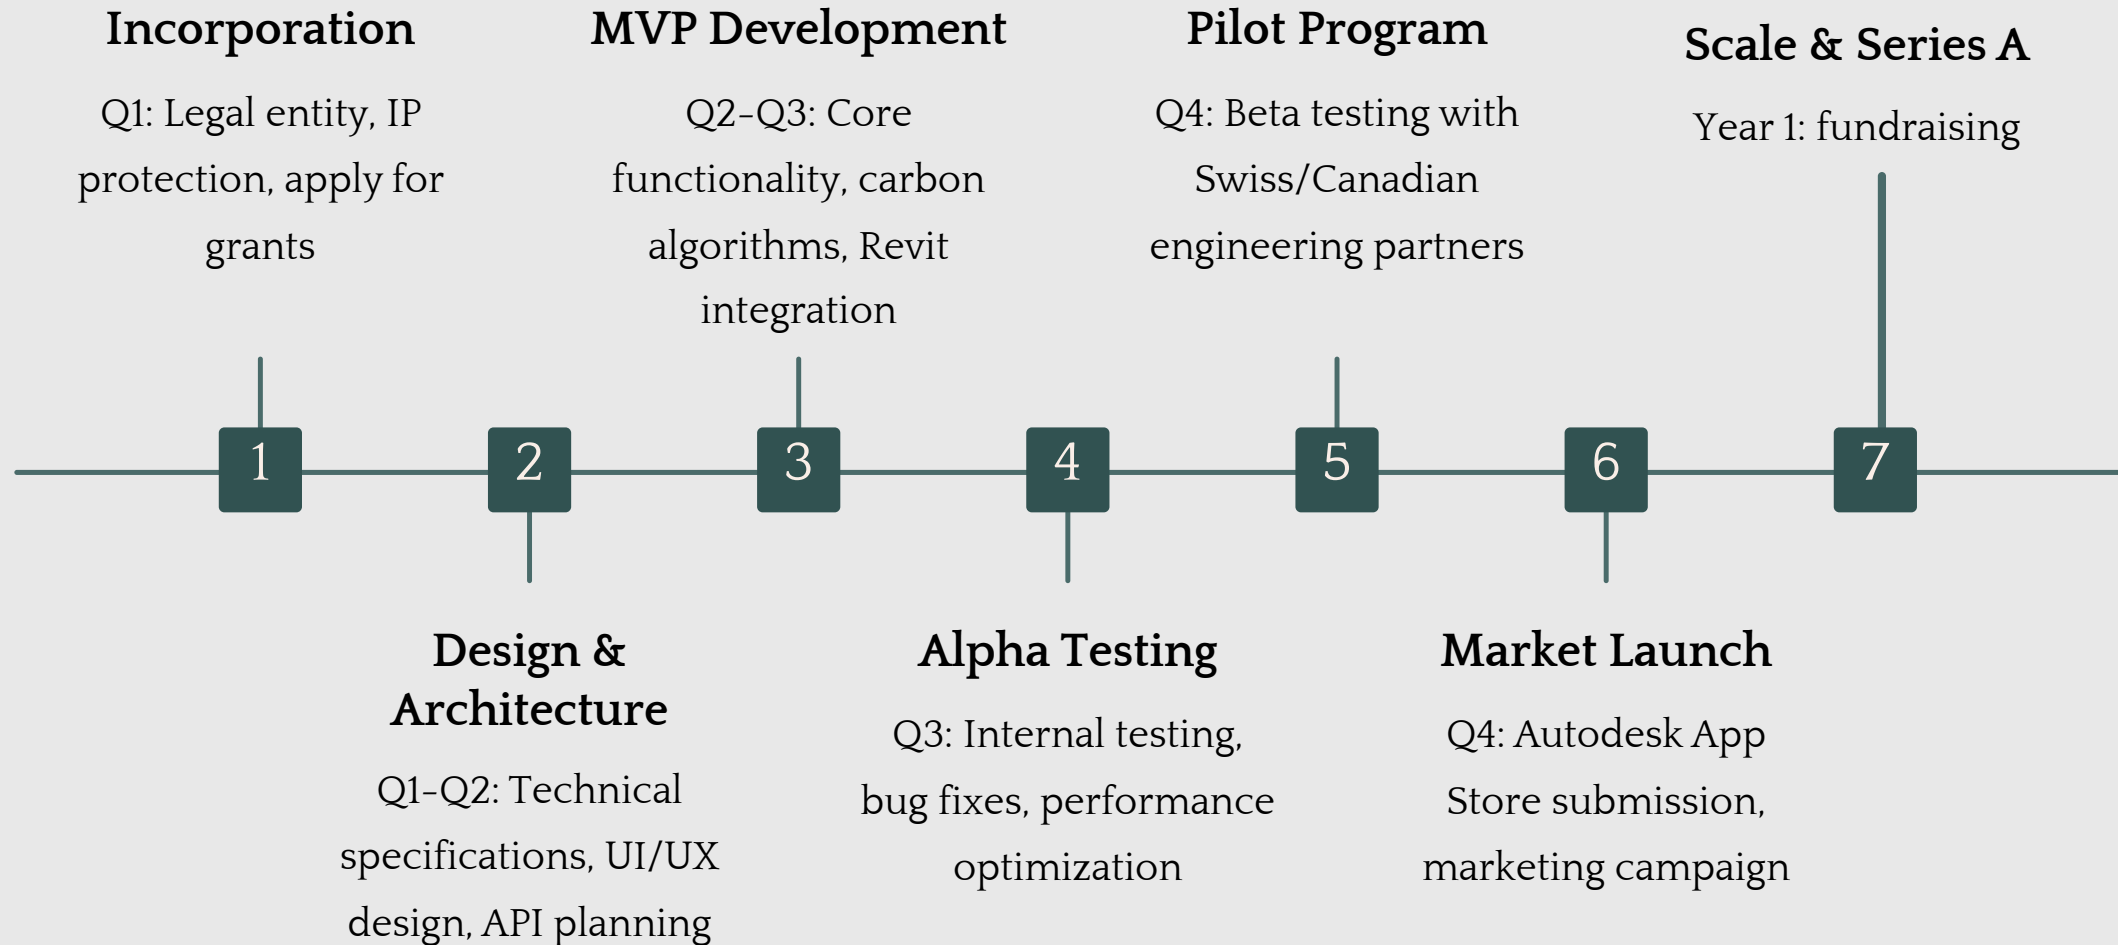

Plug-In Ecosystem

- Autodesk encourages third-party innovation, to make Revit more appealing.
- App Store is free to host, because plugins boost Revit license sales.
- Revit's API support is designed to enable external development.

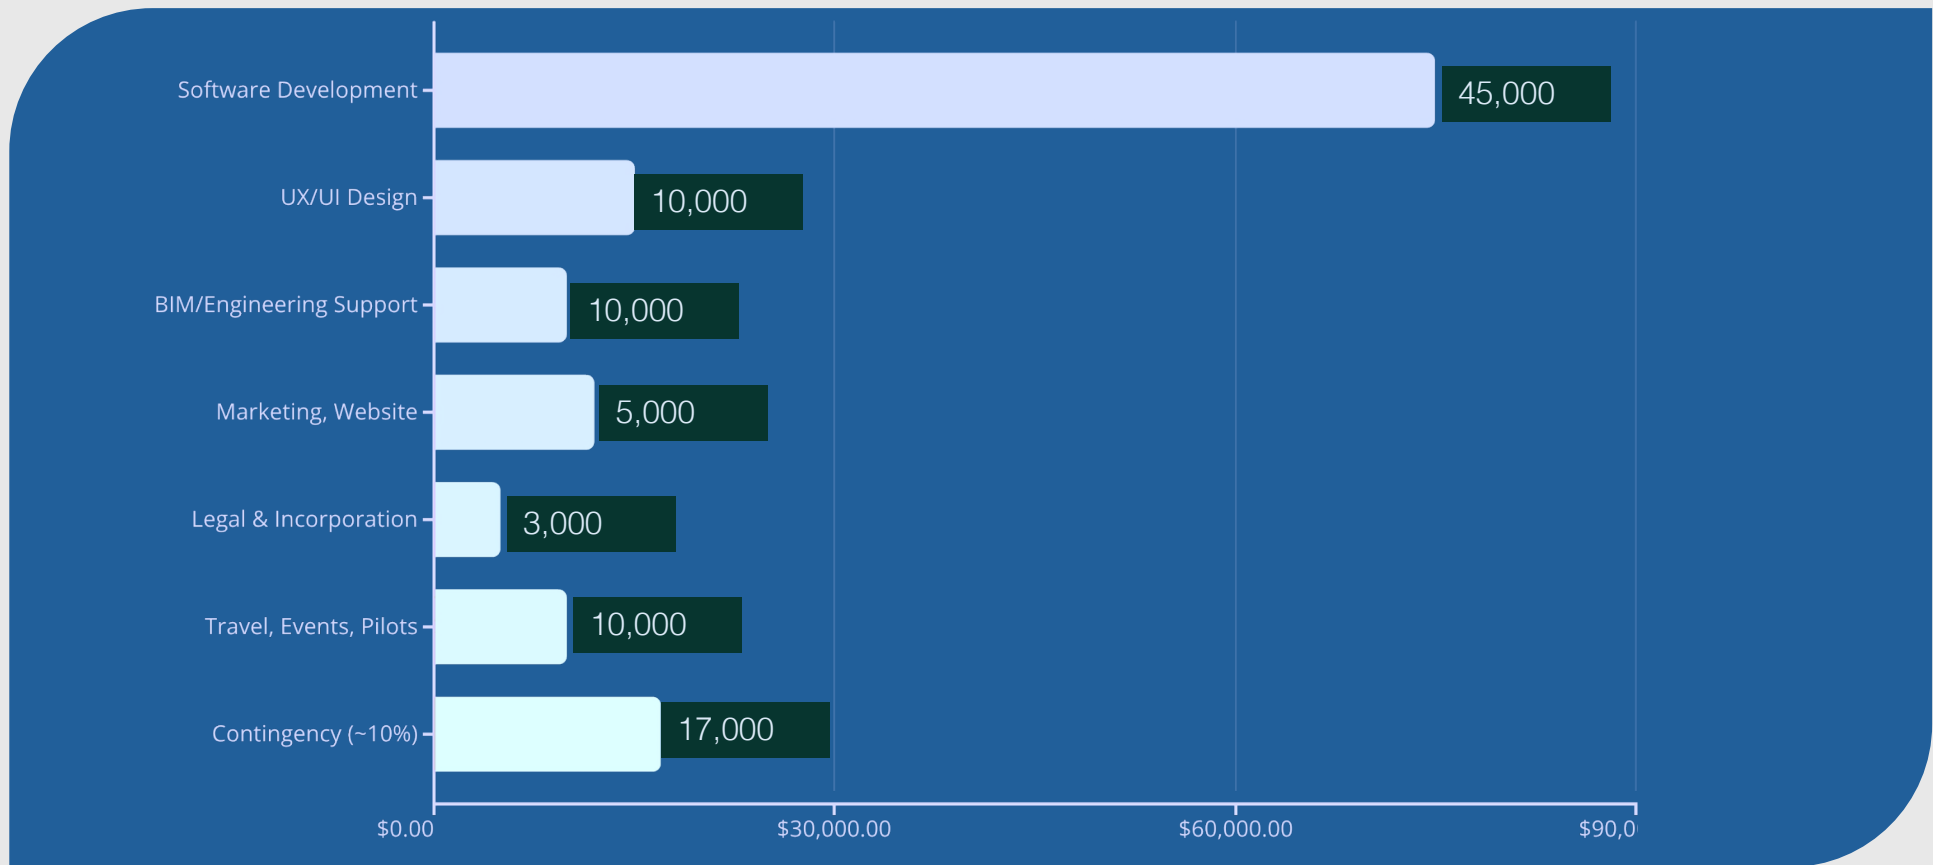

De-Risk the Business Model

- Autodesk's core business is a software platforms, not custom solutions.
- Prefer to **ACQUIRE** successful startups (e.g., Spacemaker) rather than build from scratch.
- Plug-ins reduce risk, wait for proven traction before investing

StructIQ

Every tonne of material saved
reduces cost and carbon.

StructIQ empowers smarter costs and
decarbonize cities.

Switzerland and Canada first.
Global next.

I've built the foundation, now I'm
looking for partners to scale it.
